

Concl'd
D1

a controller that selects the at least one presentation element identified by the at least one presentation element identifier and affects the presentation based on the sensed at least one control element identifier; and

a display that displays the at least one selected presentation element.

9. (Twice Amended) A method for controlling a presentation using physical objects comprising:

D2

presenting to a sensor a tangible, sensible identification-carrying device comprising at least one presentation element identifier that identifies at least one presentation element and at least one control element identifier that identifies at least one control element for the at least one presentation element identified by the at least one presentation element identifier;

sensing the at least one presentation element identifier and the at least one control element identifier;

selecting the at least one presentation element identified by the at least one presentation element identifier;

affecting the presentation based on the sensed control element identifier; and

displaying the at least one selected presentation element.

16. (Three Times Amended) A system that generates physical objects usable to control a presentation, comprising:

D3

a controller that associates at least one control element with at least one control element identifier;

a generator that provides a tangible, sensible identification-carrying device with the at least one control element identifier that identifies a function associated with the at least one control element for controlling at least one presentation element identified by at least one presentation element identifier; and

Concluded
D3
a memory that stores at least one of the at least one presentation element, at least one presentation element identifier, the at least one control element identifier and the at least one control element.

D4
21. (Amended) A system that controls a presentation using a tangible, sensible identification-carrying device comprising at least one presentation element identifier that identifies at least one presentation element, the system comprising:

a sensor that senses the at least one presentation element identifier and at least one control element identifier;

a controller that selects the at least one presentation element identified by the presentation identifier and affects the presentation of the at least one presentation element based on the sensed at least one control element identifier other than by visual modification of the identified at least one presentation element; and

a display that displays the at least one presentation element.

22. (Amended) A method for controlling a presentation using physical objects comprising:

presenting to a sensor a tangible, sensible identification-carrying device comprising at least one presentation element identifier that identifies at least one presentation element and at least one control element identifier that identifies at least one control element for the at least one presentation element identified by the at least one presentation element identifier;

sensing the at least one presentation element identifier and the at least one control element identifier;

selecting the at least one presentation element identified by the at least one presentation element identifier;
